

# SQL AND MS SQL SERVER INTRODUCTION

*Instructor:*

# Learning Goals

By the end of this lecture students  Understand what is SQL?  
should be able to:

## SQL CONSTRAINTS

PRIMARY KEY  
FOREIGN KEY  
UNIQUE KEY  
NOT NULL  
CHECK  
DEFAULT

-  Able to use MS SQL Server Management Studio to connect to Server.
-  Able create database and table use MS SQL Server Management Studio and DDL Statement.

# Table of contents

- ◇ **SQL INTRODUCTION**
- ◇ **MS SQL SERVER MANAGEMENT STUDIO**
- ◇ **DDL: CREATE DATABASE AND TABLE**

## Section 1

# SQL INTRODUCTION

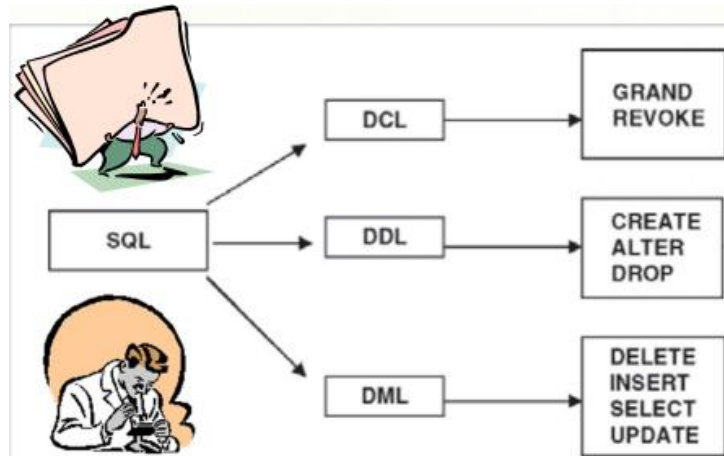

# What is SQL?

- Which is a computer language for:
  - ✓ storing,
  - ✓ manipulating and
  - ✓ retrieving data stored in relational database.
- SQL is the standard language for Relation Database System, like **MySQL**, **MS Access**, **Oracle**, **Sybase**, **Informix**, **Postgres** and **SQL Server** use SQL as standard database language.
- SQL is an ANSI (American National Standards Institute) standard.

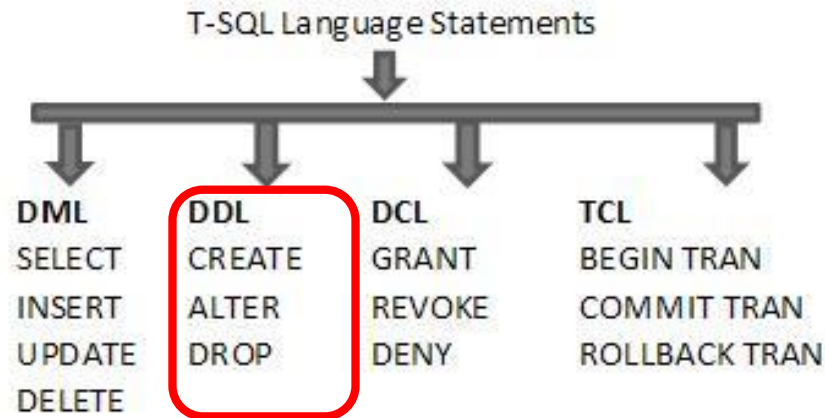

SQL consists of **three components**:

- Data Definition Language (DDL)
- Data Manipulation Language (DML) and
- Data Control Language (DCL)

- **DDL** stands for **D**ata **D**efinition **L**anguage
- Define data structures in SQL Server as creating, altering, and dropping tables and establishing constraints...

- **A SQL Server database has lot of objects like:**
  - Database
  - Schema
  - Tables
  - Views
  - Stored Procedures
  - Functions
  - Rules
  - Defaults
  - Triggers

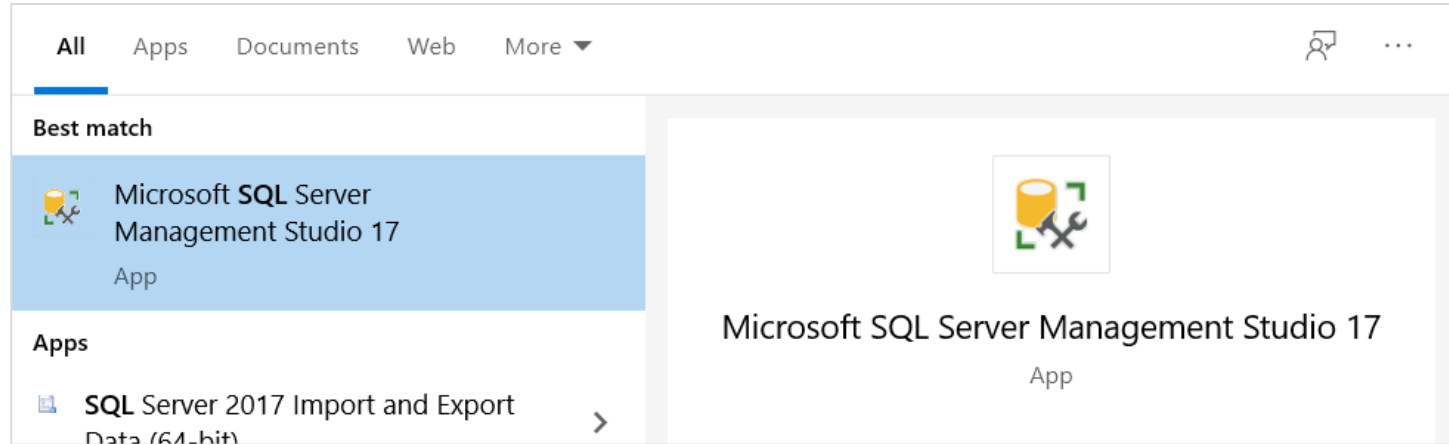

## Section 2

# MS SQL SERVER MANAGEMENT STUDIO

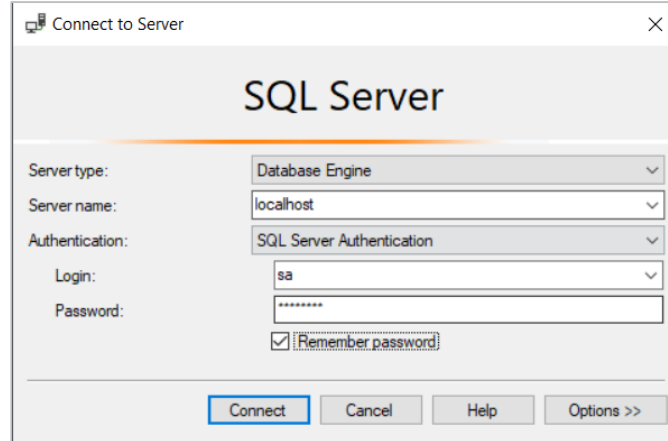

# MS SQL Server Management Studio

- Open **MS SQL Server Management Studio** in the window start:

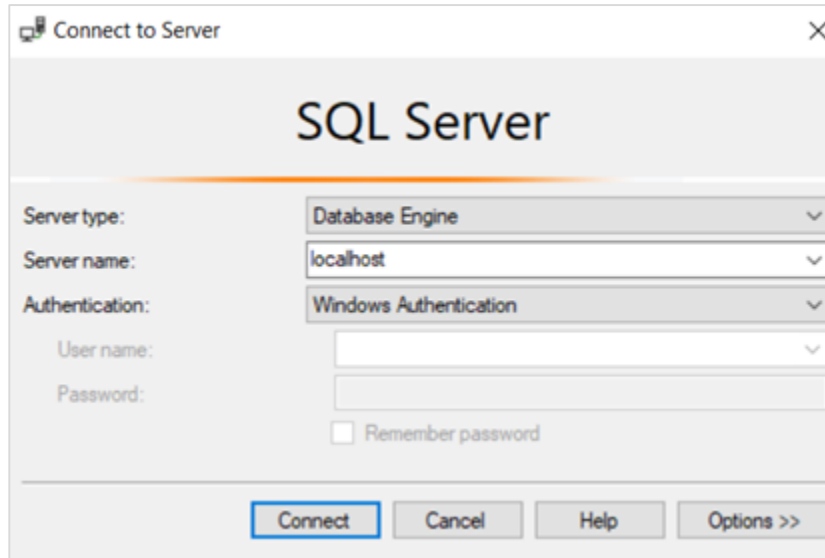

## ■ Login with account 'sa':

- ✓ **Server name:** localhost/Computer name (ex: LPP12345678A)/SQL Server IP Address).
- ✓ **Authentication:** SQL Server Authentication.
- ✓ **Username:** sa
- ✓ **Password:** Your password that used when you install SQL Server.

## ■ Login with Windows Authentication:

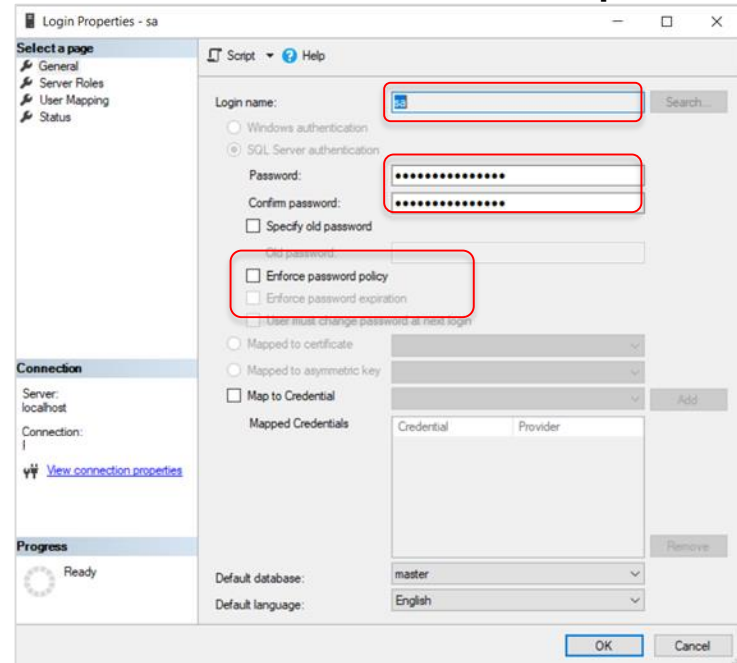

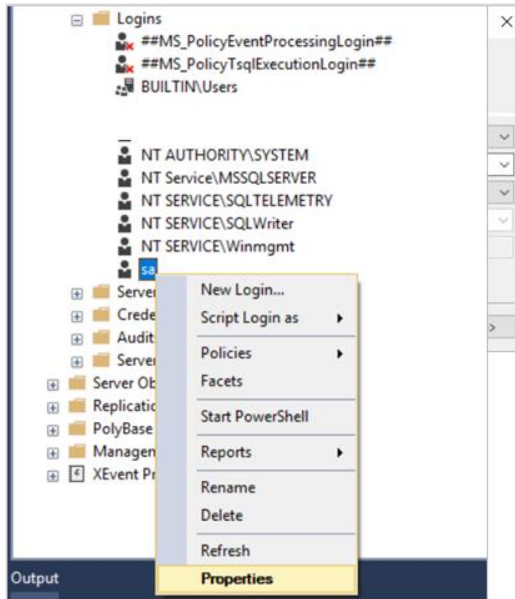

- ✓ **Server name:** localhost/Computer name (ex: LPP12345678A)/SQL Server IP Address).
- ✓ **Authentication:** Windows Authentication.

*If you do not remember the login account  
when installing SQL Server*

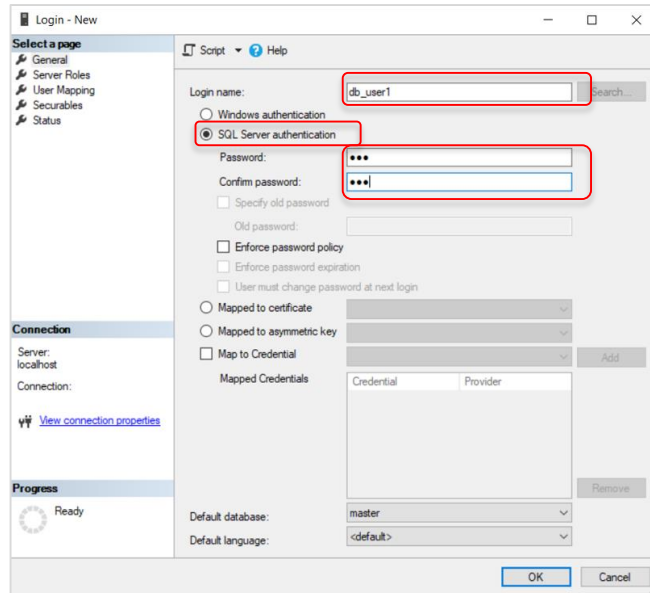

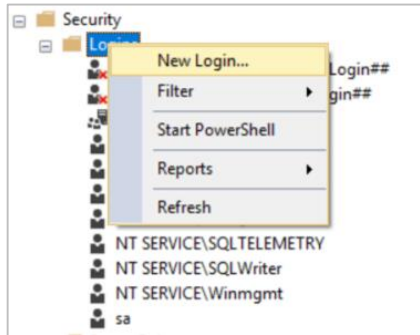

## ■ Change password account 'sa':

- ✓ Login with **Windows Authentication**
- ✓ Select '**Login**' | Right click to 'sa' | Properties | Enter new **Password** and **Confirm password** as the following screen:

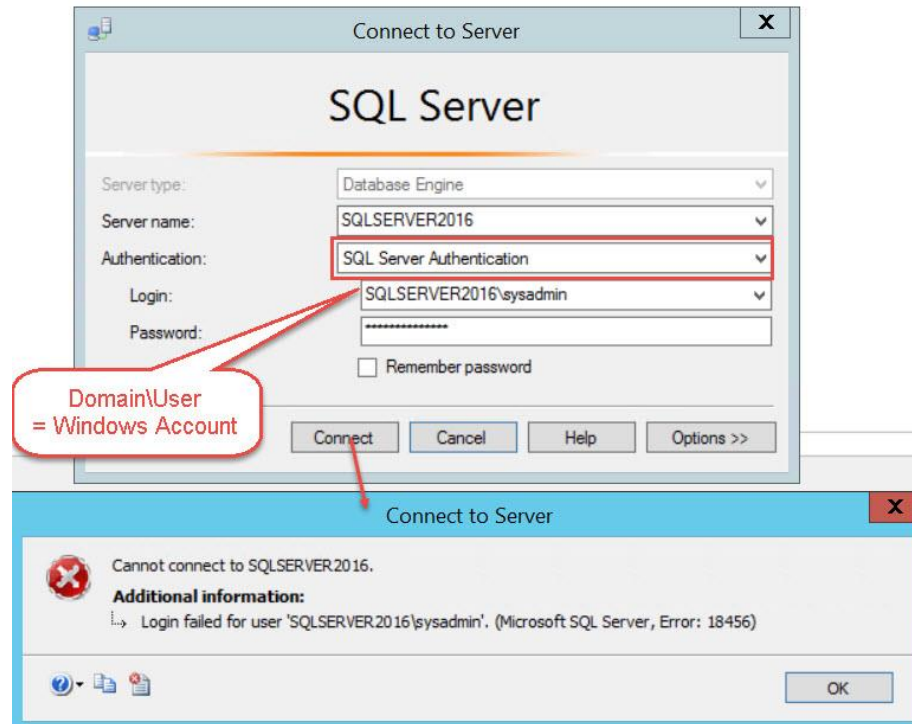

## ■ Create a new account:

- ✓ Login with **Windows Authentication**
- ✓ Right click to '**Login**' | New Login | Enter a new **Login name** choose **SQL Server authentication** and **Password + Confirm password** as the following screen:

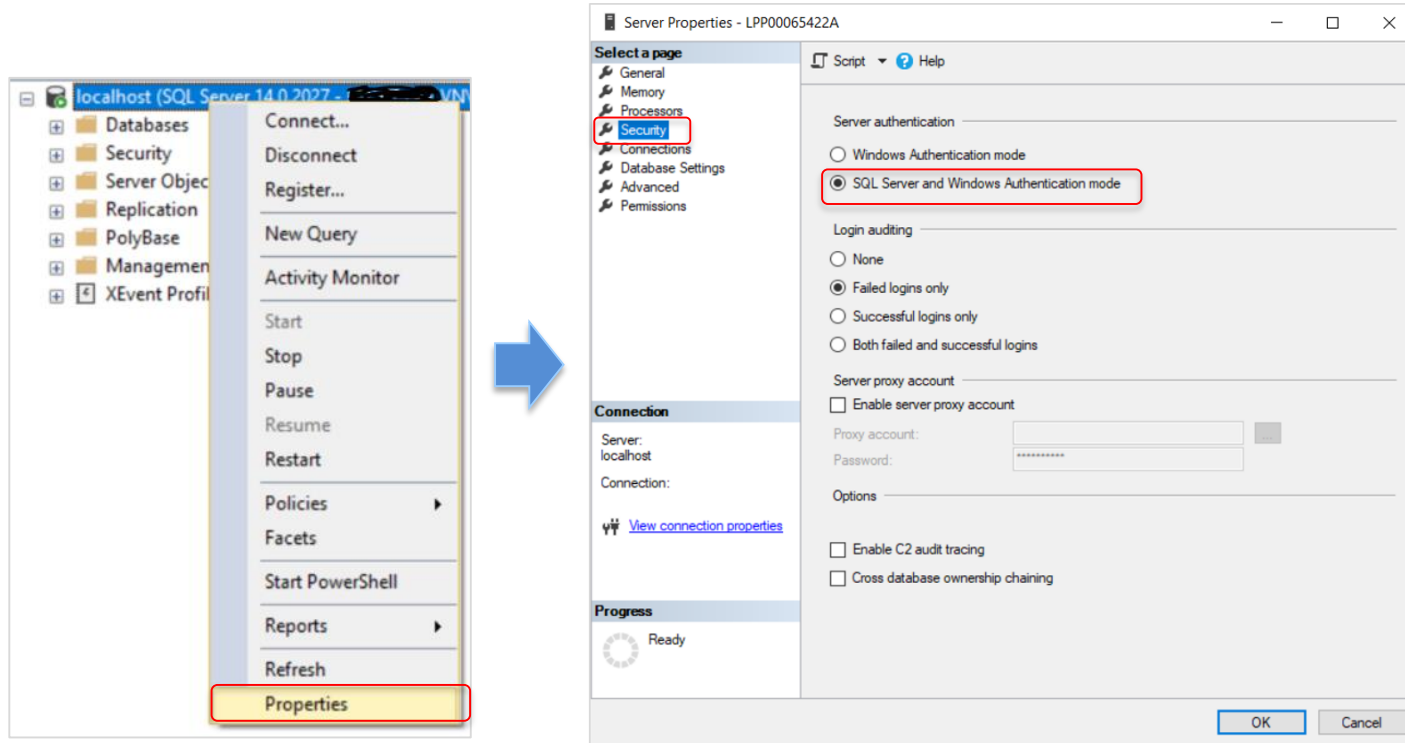

- ✓ *You can login with the created account.*

- Login Fail, how to fix?

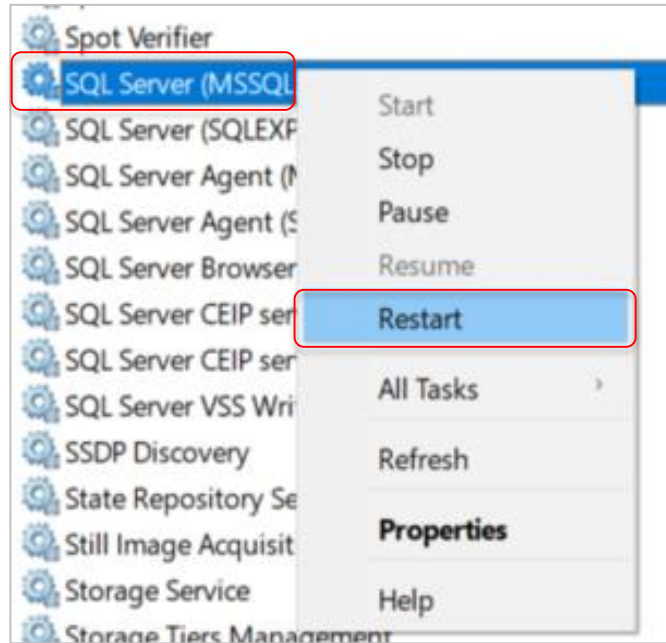

- You must enable SQL Server Authentication:

- Restart **SQL Server** and **re-login**:
  - ✓ Open **Control Panel** | **Administrative Tools** | **Services** | Right click **SQL Server**:

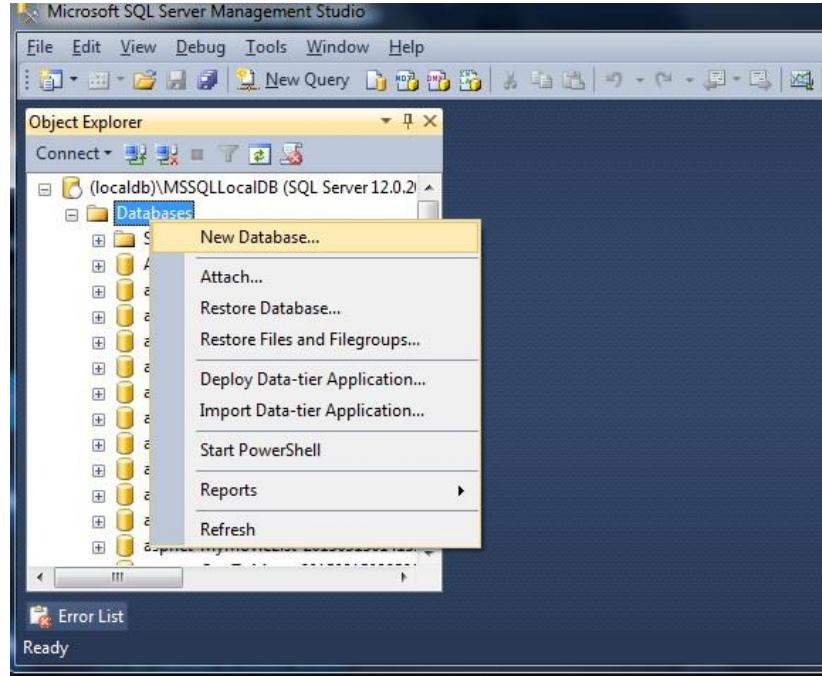

- 
- Microsoft SQL Server Management Studio (Administrator)
- File Edit View **Debug** Tools Window Help
- Object Explorer
- Connect
- NODE5\SQL2016ST (SQL Server 13.0.21)
- Databases
    - System Databases
    - Database Snapshots
    - AdventureWorksLT2012
    - DWConfiguration
    - DWDiagnostics
    - DWQueue
    - ReportServer\$SQL2016ST
    - ReportServer\$SQL2016STTemp
    - TutorialDB
  - Security
    - Logins
    - Server Roles
    - Credentials
    - Cryptographic Providers
    - Audits
    - Server Audit Specifications
  - Server Objects
  - Replication
  - PolyBase
  - Always On High Availability
  - Management
  - Integration Services Catalogs
  - SQL Server Agent (Agent XPs disabled)
  - XEvent Profiler

## Section 3

# DDL: CREATE DATABASE AND TABLE

# Create a new Database

- R-click **Database** | choose **New Database...**

# Create a new Database

## ■ Enter Database name:

New Database

Select a page

- General
- Options
- Filegroups

Script Help

Database name: HR\_DB

Owner: <default>

☒ Use full-text indexing

Database files:

Logical Name	File Type	Filegroup	Initial Size (MB)	Autogrowth / Maxsize	Path	File Name
HR_DB	ROWS Data	PRIMARY	8	By 64 MB, Unlimited	C:\Program Files\Microsoft SQL Server\MSSQL14.MSSQLSERVER\MSSQL\DATA\	
HR_DB_log	LOG	Not Applicable	8	By 64 MB, Unlimited	C:\Program Files\Microsoft SQL Server\MSSQL14.MSSQLSERVER\MSSQL\DATA\	

Connection

Server: localhost

Connection: Microsoft SQL Server Enterprise Manager

[View connection properties](#)

Progress

Ready

Add Remove

OK Cancel

# Create a new Database

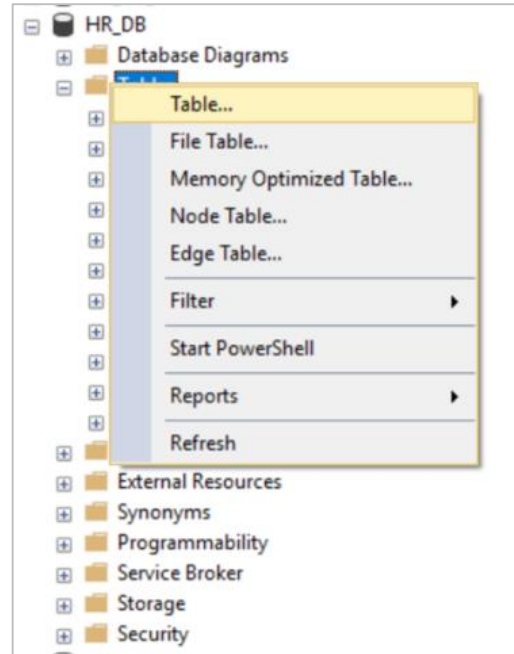

- **DDL Query:**

- ✓ Check if database not exists the creating a new database:

```
IF NOT EXISTS  
    (SELECT * FROM sys.databases d WHERE d.name LIKE 'HR_DB')  
CREATE DATABASE HR_DB;
```

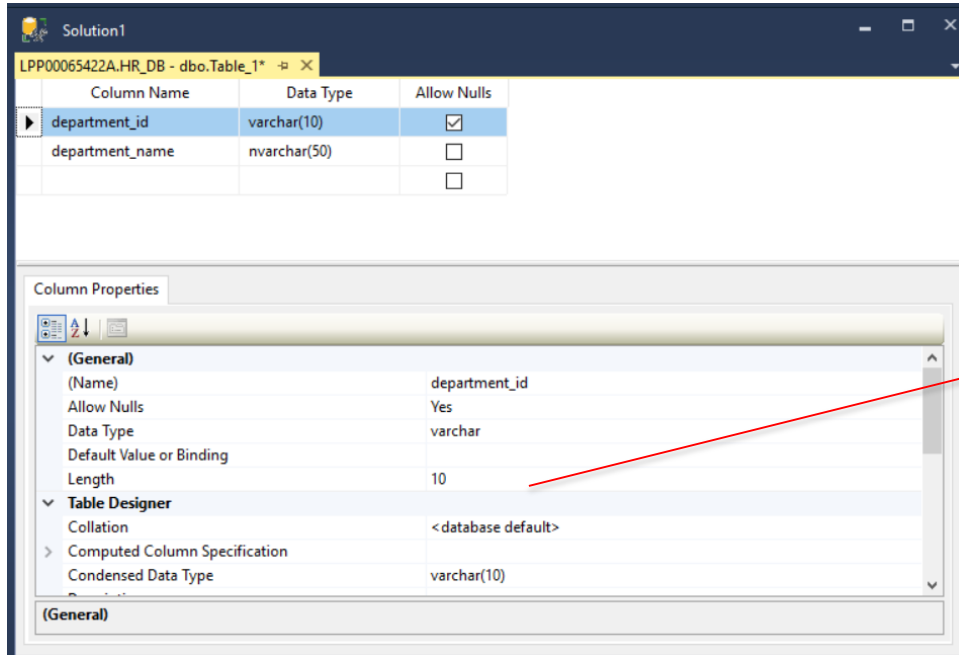

# Create a new Table

- R-click Tables | choose **Table...**

# Create a new Table

- R-click Tables | choose **Table...**
- Create columns of table (name, type, ..) and **Ctrl + S** to save table.

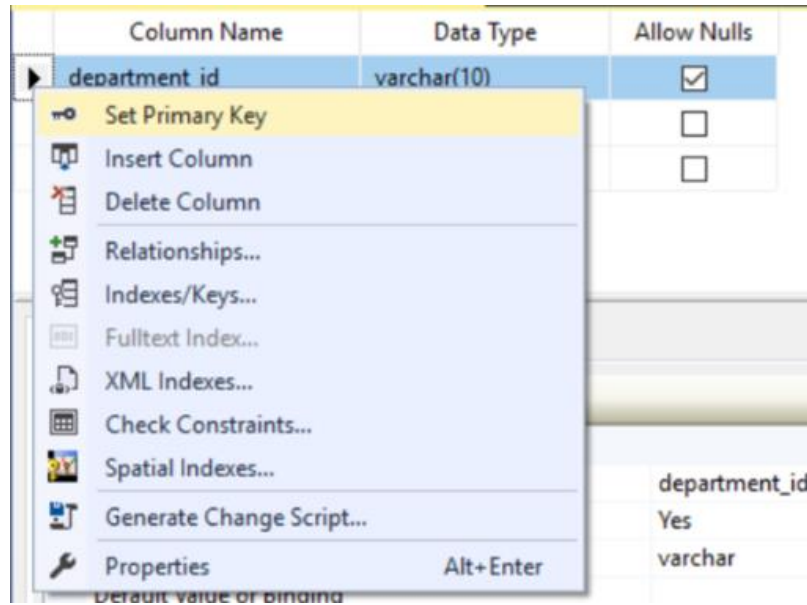

*Properties of a selected column,  
you can customize the data type,  
length, ...*

# Create a new Table

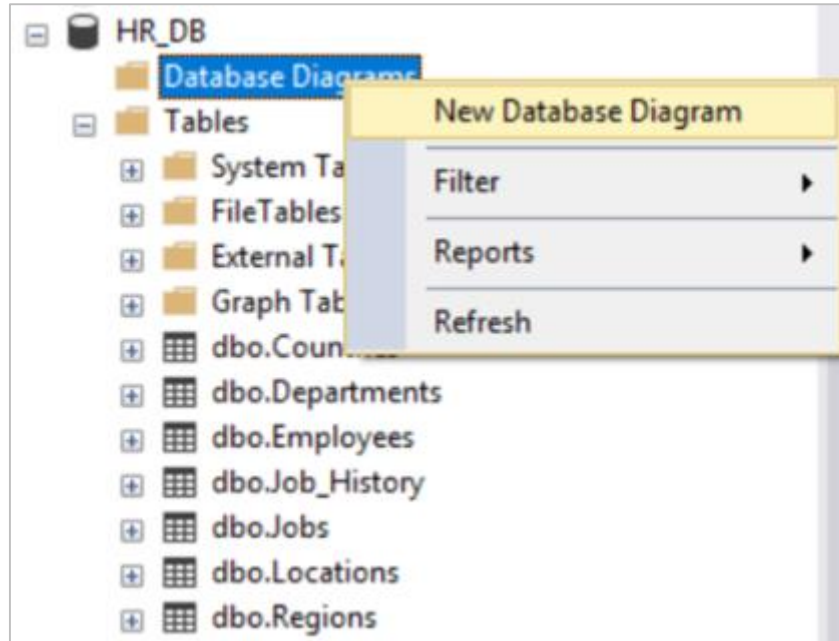

## ■ Primary key:

- ✓ R-click in a selected column | choose **Set Primary Key**:

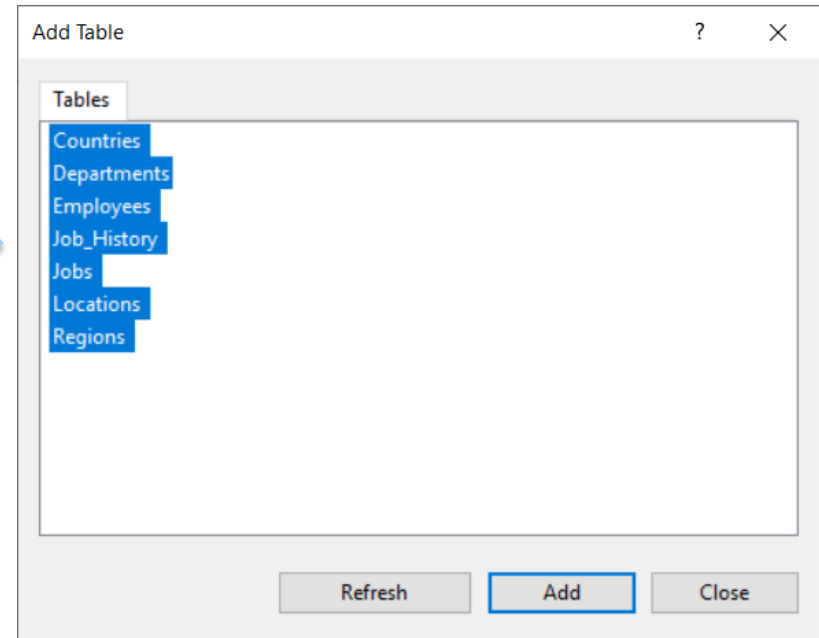

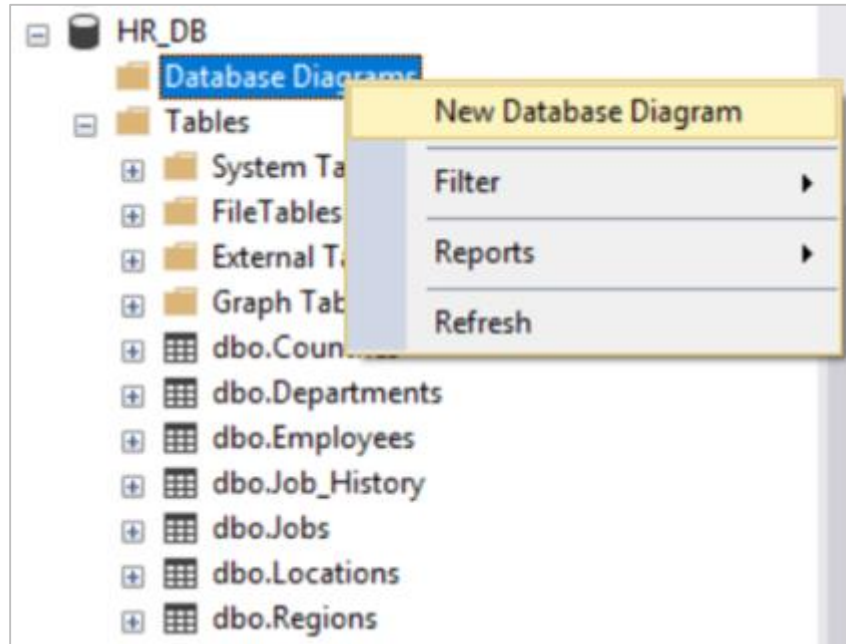

# Create a Relationship between two tables

- R-click **Database Diagrams:**

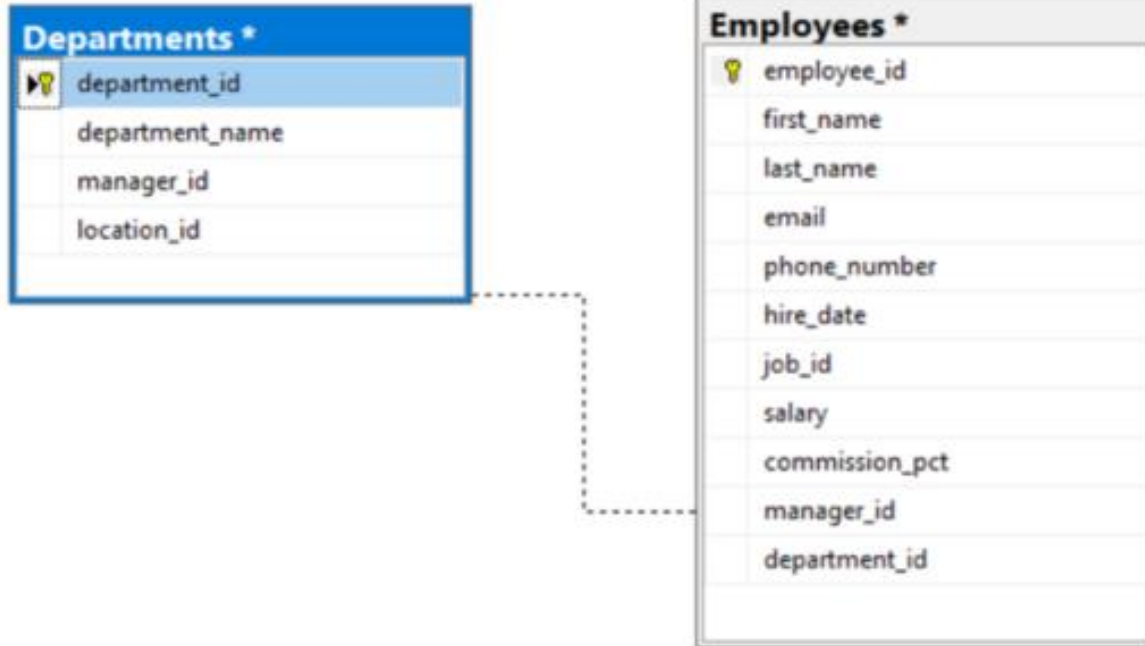

# Create a Relationship between two tables

- R-click **Database Diagrams** and **Add Table**:

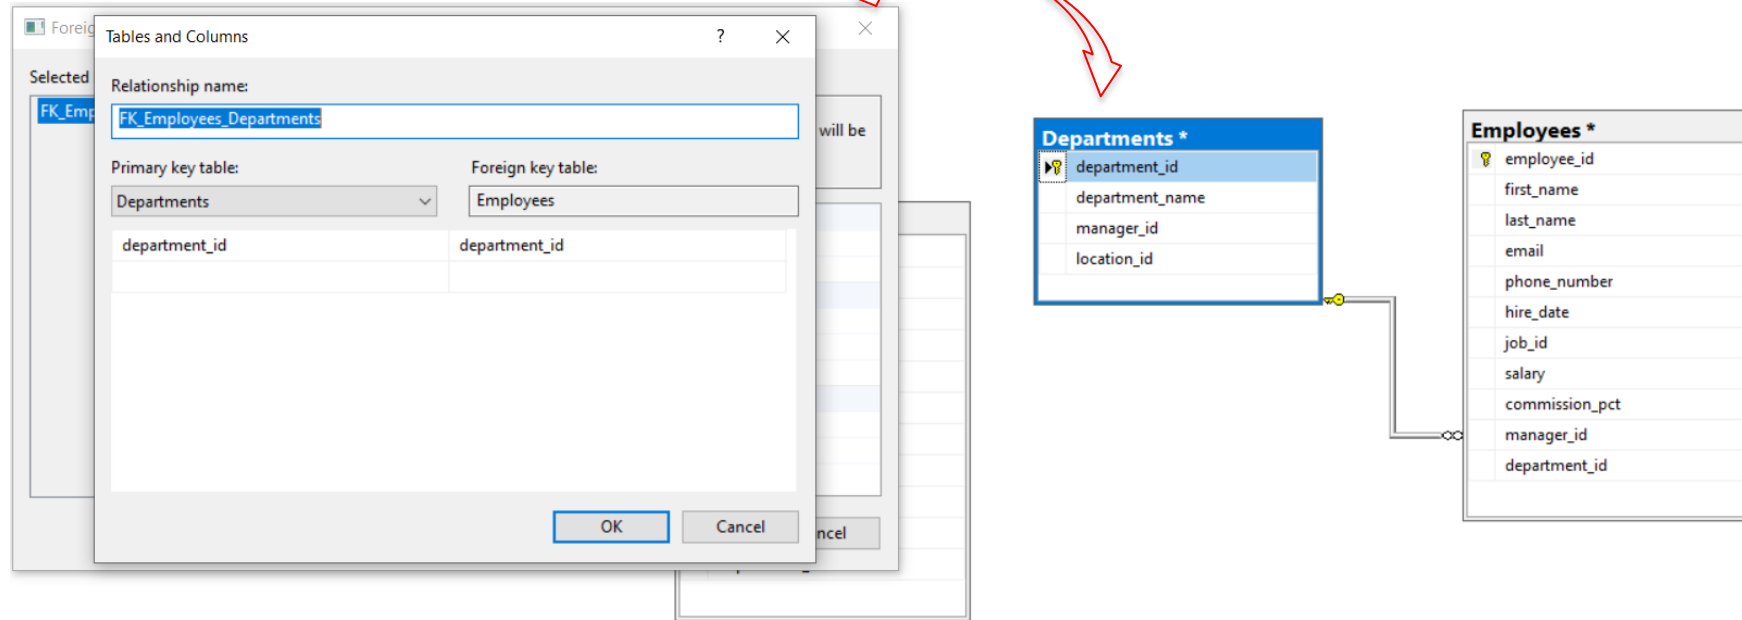

# Create a Relationship between two tables

- Drag **Primary Key (PK in Table A)** to **Foreign Key (FK in Table B)**:
  - ✓ Notice that, FK in Table B must **the same as datatype** with PK in Table A.

# Create a Relationship between two tables

- Confirmation, click **OK** and result:

# Create a new Table

## ■ DDL Query:

```
CREATE TABLE dbo.Departments(  
    department_id    INT PRIMARY KEY,  
    department_name  VARCHAR(100),  
    manager_id       INT,  
    location_id      INT  
)  
GO
```

```
CREATE TABLE dbo.Employees(  
    employee_id      INT PRIMARY KEY,  
    first_name       VARCHAR(20),  
    last_name        VARCHAR(30) NOT NULL,  
    email            VARCHAR(50) NOT NULL UNIQUE,  
    phone_number     VARCHAR(20),  
    hire_date        DATE NOT NULL,  
    salary            NUMERIC(10, 2)  
    commission_pct   NUMERIC(6,2), -- commission percentage  
    manager_id       INT,  
    department_id    INT,  
    CONSTRAINT emp_dept_fk FOREIGN KEY(department_id)  
    REFERENCES dbo.Departments(department_id)  
)
```
